

Reference and service guide

SKF rebuild kit for PreSet® hubs provide all the components necessary to refresh your PreSet wheel end, including specific, tighter toleranced SKF tapered bearing sets, SKF Scotseal PlusXL wheel seal, SKF TF hubcap (if applicable), and the OEM precision machined PreSet bearing spacer.

PreSet hub assemblies have been in the heavy truck market for upwards of 8 years and we are seeing more of these wheel ends coming in for their first major service. SKF rebuild kits put the extended life back into the wheel end assuring that it will keep on going for miles and years. Each kit comes with a 3 year warranty.

This easy to use reference guide is broken into three segments:

- Inspection and service—Recommended inspection and service intervals and procedures.
- Hub assemblies—Comprehensive cross reference list of hub assembly part numbers and the corresponding SKF rebuild kit.
- Interchanges—Complete component interchange list.

PreSet inspection and service recommendations

Driver pre-trip visual inspection:

- With parking brake set, walk around and visually inspect each wheel assembly for loose, damaged or missing fasteners or hubcaps.
- Check for oil leak at hubcap, axle flange gasket or fill plug.
- Check for lubricant on the hub, brake components or inside of wheel and tire.
- Δ If any of the above conditions are found, place the vehicle out of service until it can be repaired.

In conjunction with preventative maintenance schedule:

- Check all items listed in pre-trip visual inspection.
- Lift and support axle rotating the wheel and check that it rotates freely. Listen and feel for any signs of vibration or rough bearing operation.
- Δ If vibration or roughness exists or if any item from pre-trip inspection are noted, service hub as per the recommended service indicates.

Every 12 months or 100,000 miles (whichever comes first):

- Inspect external components for damage.
 - o Hubcap loose, damaged or missing components.
 - o Loose, damaged or missing fasteners.
 - Δ Replace as needed.
- Inspect for leaks.
 - o Check for wetness around hubcap area.
 - o Check for wetness on hub, brake hardware or brake shoes.
 - o Check for wetness at inboard seal.
 - Δ If lubricant present at any of the above areas, investigate cause and take corrective action.
- Inspect for proper lubricant level and condition.
 - o Check for contaminants such as water (milky or white appearance), metal (a magnet may be used), grit (feel for foreign material).
 - Δ If inspection indicates contamination, service hub as per the recommended service indicates.
- Conduct functional checks.
 - o Lift and support axle rotating the wheel and check that it rotates freely. Listen and feel for any signs of vibration or rough bearing operation.
 - o Check end play with dial indicator.
 - Δ If vibration or roughness exists or if end play exceeds 0.006-inch (0.15mm) service the hub as per the recommended service indicates.

Recommended service

- **Recommended service interval is 500,000 miles** or every second brake service for on-highway vocations. In more severe duty applications, this service may be required more often. Use the 12 month inspection criteria as indication as to whether more frequent service is needed.
- Replace inner and outer bearing cones and races, spacer, and seal. SKF rebuild kit for PreSet includes all the necessary components for the recommended service.

Note: For complete and detailed safety, inspection and service instructions, consult ConMet Service Manual for PreSet Hub Assemblies #10005642 which can be located at www.conmet.com.

Identifying PreSet hub assemblies

Identifying your hub assembly is an important first step to proper service. The PreSet hub assembly's unique design offers extended life when the proper parts are used and instructions followed.

Final hub assembly number

This number is stamped on one of the following:

- Mounting flange face (see Figure 1)
- Diameter of the mounting flange (see Figure 2)
- Back side of the mounting flange (see Figure 3)

The final hub assembly number identifies the hub assembly, hub machining, studs, bearings, spacer, seal and ABS ring.
